

Bretnor 1609

A new Almanacke and  
Prognostication for the  
yere of our Lord God.

1609

Being the first from the Bissextile  
or leape yere,

Calculated and composed according  
to Arte for the Latitude and Meri-  
dian of the honorable Citie of  
London, and may verie  
well serue al the South  
parts of great Bri-  
taine.

By Thomas Bretnor, teacher of A-  
rithmetique, and Geometrie  
in the famous Citie of  
London.

Printed at London for the Compa-  
ny of the Stationers.

A note of the mooueable feasts, according to our accompt.

The reformed or accompt beyond the Seas.

Since his happie conuining to London the 7. of May.	6
A ne	

A necessarie rule to know the Tearmes, and  
their Returnes.

Hillarie Terme  
beginneth the 23.  
of January, and  
endeth the 12.  
of Februarie

hath 4  
returnes.

1. Octabis Hillarie. Jan. 20
- 2 Quind. Hillarie. Jan. 27
3. Craft Purifi. Feb. 3
- 4 Octab. Purific. Feb. 9

Ascension Terme  
beginneth the 3  
of May, and en-  
deth the 29. of  
the same.

hath 5  
returnes

- 1 Quind Pasch. May. 1
2. Tres Pasch. May. 8
3. Mens Pasch. May. 15
4. Quinq. Pasch. May. 22
5. Craft. Ascens. May. 26

Trinitie Terme  
beginneth the 16.  
of June, and en-  
deth the 5. of  
July.

hath 4  
returnes

1. Craft. Trinit. June. 12
2. Octab. Trinita June. 19
3. Quind. Trinit. June 26
4. Tres Trinitatis. July. 3

Michaelmas  
Terme begins  
the 9. of Octo-  
ber, and endeth  
the 28 of No-  
vember.

hath 8  
returnes

- 1: Octabi. Mich. Octob. 6
- 2, Quind Mich. Octo: 13
3. Tres Mich. Octob. 20
- 4 Mens. Mich. Octo. 27
5. Craft. Aninra. Nouem. 3
6. Craft. Marti. Nouem. 12
- 7 Octab. Marti. Noue. 18
8. Quind Marti. Noue. 25

The Vacation betwixt Tearme and  
Tearme.

Bretnor. 1609.

A Prognostication,  
for this present yeare of  
our Lord GOD.

M·DC·IX.

Being the first from the Bissextile,  
or Leape-yeare.

Wherein (besides the generall state of the  
four Quarters of the yeare, and the  
particular disposition of every day in  
the same) are inserted sundry Physi-  
call observations, with the  
Eclipses of the Luminaries,  
and other notes and  
directions of good  
consequence.

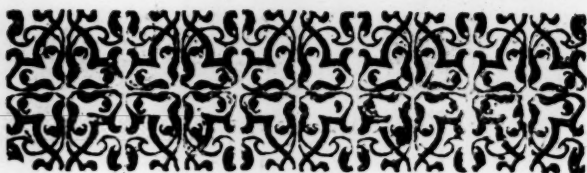

Probably gathered from the severall habitudes  
and configurations of this our Dybe, to  
that of Light, and others; and of  
all of them one to another.

By

Thomas Bretnor, practitioner  
in Physicke.

Imprinted at London for the  
Companie of Stationers.

1609.

## Phisicall directions.

**T**hat these inferiour bodyes depende vpon the superiour, and those of God himselfe, no true Philosopher, or sound Scholar doth doubt or denie: neither is it to be meruailed, that the most sapient Architect doth governe those things which he hath made, by others which he hath likewise formed, and consequently worketh by subordinate meanes: for if hee should otherwise bring his decree to passe, there would be no place left for Miracle. And that the Lord effecteth his will by secundarie causes (salued in myraculous infringement) common experience teacheth: for (to let passe the wonderfull effectes of the Sunne subicible each simple mans capacittie, and the other planetarie Orbs of more secret influence) doth not the fluxe & reflux of the Sea, with the Braine and Humours both of Men & Beastes, and of Creatures liuing in water as on dry land depend, increase and decrease, according to the Moones motion, visuall appearance, and habitude to the Sunne, and other fixed and moueable Orbs: Which graunted to be true (as of necessitie it must) how behouefull the knowledge of Astrologie is, especially, in practise of Phisicke, I referre to euery mans iudgement.

And first in Phlebotomie or Blood-letting, although indeed a well experienced Chirurgion, without any great danger, may open a Veine when the Moone governeth that member wherein incision is to be made, because he knoweth, or is directed by the learned Phisition, what quantitie of Blood is fit to be euacuated, and likewise when and how to stoppe the fluxe thereof at pleasure: yet notwithstanding, I wish euery one to consider, that at such a time, the best Blood is impelled, and floweth more abundantly to that member, and mixeth it selfe so intime with the body, that when the one is spent, the other spillet: which how dangerous it is to the sicke patient Medicorum sit iudicium.

- In Phlebotomie  
6. things ought  
chiefely to be  
considered: viz.
1. How many wayes it is hindzed.
  2. What time of the Sicknesse it is to be bled.
  3. To whom it is meete.
  4. What is to be obserued befoze it, at the instant, and after it.
  5. What Veynes may safely be opened, and what Disease by each is curable.
  6. The most conuenient season to effect it.

For where all, or some of these, are neglected, the patient is obiected to many perillous Diseases: as pestilent Feuers, Squinancie, the Dropsie, Palsie, Gout, Apoplexie Plurisses and frenzies: yea, many times present death insuereth without other cause, or signification at all by course of nature.

1. These things principally hinder Phlebotomie: viz. Coldnes of Nature and Climate, extreame grieue or sorrow, Watching, Bathing, the sportes of Venus, Fulnes of meate or drinke, long Sicknes, Fearefulness or Faint-hartnes Indigestion, fluxes naturall and vnnaturall, the euill configuration of the Planets, &c.
2. The time of action in some Diseases, is at the very aggreffe or beginning: as in Plurisses, burning Feuers, &c. In others, at this or that time, as to the nature of the Disease, and strength of the patient is most agreeable.
3. It is most necessarie for Plethoricke persons, that is, for such as greatly abound in any Humour ouer and aboue the iust quantitie of naturall capacitie: and herein the complexion, strength, and age of the patient, is much to be regarded: for from very young, weak, or old persons: or from very leane, fatte, or grosse people, Blood in no case is to be taken.
4. Befoze it, vse moderate walking, or other exercise, that may bring the body to a due temperature. At the instant, if need be, vse some comfortable Drinke: And after it, abstaine from foode & sleepe for the space of vi. houres, and from all Wike-meates, and superfluitie of Drinke, long after: And (if possible) vse Meates of light digestion and good nutriment: and beware of great cold, vehement exercise, and infectious ayre.
5. Each seuerall Veine, with his curable effectes, is so apparantly knowne to a good Chirurgion, that further instruction to him, were needles: onely this I know, that there are some emperiall Blood-succours amongst them, who litle knowing the Disease, open one Veine in stead of an other: yea, some time misse the Veine, and wound the Sinew: But to such, I with more perfection, or lesse practise: and counsell such as loue their health, to blesse them out

## A Prognostication.

of their hands.

6. Lastly, for the time: The Spring and Autumne, are most hol-  
some, as freeest from nipping cold, or parching heate, with this Pro-  
viso, that Blood be taken in the Spring time, from the right side:  
and in Autumne, from the left.

The age of the Moone also, and Signe wherein she is, ought diligent-  
ly to be considered: for, from

The	{	Change to the first quarter,	}	let	{	middle age	}	Bleed.
		First quarter to the full,						
		Full to the last quarter,						
		Last quarter to the change						

Generally let blood the Moone in Aries, first halfe of Libra, and  
Aquarius.

But more particularly let Blood,

The	{	Flegmaticke,	{	the Moone in	{	Aries, or Sagittari.
		Cholerick,				Cancer, or Pisces.
		Melancholick				Aquari, Libra first halfe.
		Sanguine,				any of them.

The most laudable Aspectes for this purpose, are the Coniunction  
of the Moone with Iupiter or Venus: and the Trine or Sextile  
of the Moone with Iupiter, Sol, Venus, or Mercury.

The Trine or Sextile of Mars with the Moone are indifferent: as  
also the Quadrature or Opposition of the Moone with Iupiter  
or Venus.

But in any case let not the Moone at such time, be neare to the  
Coniunction, Quadrature, or Opposition of the Sunne, Saturne,  
or Mars; or one of them in like configuration with another.

Make Scarification in like Signes and Aspectes as in Phleboto-  
mie: saving that this is effected with better successe, the  
Moone increasing,

### The holsome effectes of Phlebotomie.

The sad in minde it chearefull makes, and anger doth appease:  
From madnes, fond-sicke louers salues, and clarifies the eyes:  
The humid braine, and mentall powers thereby are purified,  
And raging heat of Choller fell, is also qualified.

By it the Bowels purged are, and good Digestion wrought:

The

The stomacke eased, and body-felfe to natures-sisteme brought:  
Pure senses, and due sleepe it yeeldes; all tediousnes expels,  
Restores the hearing, voyce, and strength; and Venus heat refels,

## For Purging.

**S**eeing that Purgation is nothing els but an evacuation of vitious Humours, molesting the body, by reason of their heterogenall qualitie, it must needes be very dangerous to giue purgatiue Medicines to such as are of a good constitution of body, or enioy the benefit of perfect health, because thereby they often bee made giddy, hained, and subject to gripinges in the belly, unnaturall Flures, and many other perillous and incurable Diseases: Therefore I wish none to take Purgations that are very fatte, leane, weak, young, or aged, or haue any other naturall Flure, or vse to vomite, or keepe a good diet: but onely such as are of a strong body, and are bered with superfluitie of unnaturall Humours, whether they be presently sick, or futurely feare the force thereof: To the better effecting whereof.

- |   |   |   |
|---|---|---|
| In Purging,<br>let these 9.<br>things be diligently considered. | 1 | The time of the yeare.                    |
|   | 2 | The temperature of the Region.            |
|   | 3 | The part affected.                        |
|   | 4 | The Humour abounding.                     |
|   | 5 | The place fittest to auoyde the same.     |
|   | 6 | The age and strength of the patient.      |
|   | 7 | The manner of Sicknes.                    |
|   | 8 | The strength of the Medicine.             |
|   | 9 | The place and configuration of the Moone. |

For these being unknowne, the Medicine cannot be administered without euident perill to the Patient.

I The seasons prescribed in Phlebotomie, are also good for this purpose: and Sommer is not amisse, if the Canicular dayes prove not too intemperately hot: for such is the state thereof (for the most part) in our Countrey, that it little differeth from their Spring or Haruest in Spaine, or the South partes of France: and seeing that our Countrey men are more giuen to suffer then they, and that, Plus necat gula quam ensis. I wish them either to auoyde that common flane, or by Physicall meanes seeke to prevent future Maladies.

## A Prognostication.

And that the Medicine may worke with better successe, Purge  
euer in the waie of the Moone, with this consideration also: that

Flegme be purged with } Electuaries, } y<sup>e</sup> Moone in } Cancer.  
                                      } Potions,        } Scorpio  
                                      } Pilles,           } Pisces.

And in a Coniunction or Sextile of Mars, or the Sunne.

Choller be purged with } Electuaries } y<sup>e</sup> Moone in } Cancer.  
                                      } Potions,        } Scorpio.  
                                      } Pilles,           } Pisces.

and in a Trine or Sextile of Venus.

Melancholy be purged with the same Medicines, the Moone sci-  
ted as before, and in a Trine or Sextile aspect of Iupiter.

The vertue } Attractive } is best holpen } Aries, Leo, or Sagitta.  
                  } Retentive } the Moone in } Taur. Virgo, or Capri.  
                  } Digestive } Gemini, Lib. or Aqua.  
                  } Expulsive } Cancer, Scor. or Pisces

Prepare Humours the Moone in Gemini, Libra, or Aquarius.

Use Accizing the Moone in Cancer, Leo, Virgo.

Take } Vomites, } y<sup>e</sup> Moone in } Aries, Taur. Leo, or Capr.  
          } Gargarismes } Cancer, or Aries.  
          } Glitters,        } Aries, Libra, or Scorpio.

For diseases, the Moone in Cancer, Scorpio, or Pisces,  
and in a Trine or Sextile of Iupiter or Venus.

Bath for } Cold diseases, the Moone in Aries, Leo, or Sagittari, and  
                  } in a Trine or Sextile of Mars or Sol.

Menstrues, the Moone in Libra or Pisces, & in a Trine  
or Sextile of Venus.

## Husbandly Aduertisements.

Set or sow } moyst } ground, the Moone } decreasing.  
seeds in } dry } } increasing.

Grasse or Plant, the Moone in Taurus or Aquarius, and in like  
configuration.

Cutte or dyesse Clines at the full of the Moone, and when she is in  
Taurus, Leo, Scorpio, or Sagittarie.

Sette oꝝ remooue Plants, Rootes, and such like, from the change to the full.

Seld oꝝ Libbe Cattle from the last quarter to the change, the Moone placed in Aries, Sagittarie, oꝝ Capricorne.

Sheare oꝝ clippe Sheepe, the Moone increasing.

Fell Timber for building, from S. Martins day untill the Calends of Ianuarie, and in the last quarter of the Moone.

Plash hedges, and Loppe Trees for Fetwell, the Moone increasing in Aries oꝝ Libra, and aspected of Iupiter oꝝ Venus.

Cut Haire the better to grow, the Moone in Taurus, Virgo, oꝝ Libra, and in a Trine oꝝ Sextile of Iupiter oꝝ Venus increasing.

To destroy Haire, Cornes, Wermes, Wartes, oꝝ such like excrescences, Cut them in the Last quarter, and when she is in a Coniunction, Quartile, oꝝ Opposition of Iupiter oꝝ Mars.

A perfect and easie way to finde the time of high Water, in most places of this Kingdome, and Countries adioyning.

**I**n the Calender is set downe the houre and minute of Full sea at London-bridge, for euery day in the moneth, according to the Moones motion: which may be hindered oꝝ furthered by Windes oꝝ Land-floods, as the one is stated, oꝝ the other falleth: But as these are seldome extreame, so doe they not often cause any great difference in time. If therefore you desire to know the time of Full-sea in any place heere noted, looke for the day of the moneth, and against the same (toyning to the Foraine Account) you shall finde the houre and minute of Full-sea at London-bridge, and for any other place: adde oꝝ subtract so many houres and minutes too oꝝ from the time there set downe, as this Table following shall appoynt, and the whole of the one, oꝝ remainder of the other, shall be the time required. Example.

The 1. of Ianuarie I would know the time of Full sea at London-bridge: Against that day in the Column under the title, I finde that it is High-water there at 3. a clocke. Now I would know

## A Prognostication.

know what time it shall be Full-sea at Linne, Humber, Weymouth, &c. adde 3. houres (as this little Table following sheweth) and it maketh 6. a clocke, the time of Full-sea in all those places. And for Gravesend, Downes, Tenet, &c. subtracting an houre and an halfe, I finde Full-sea the same day there, halfe an houre past one: and so of all the rest.

This former Table consisteth of 5. Columns: the first whereof, containeth the names of Cities: the second, the rhombe or poynt of the Compasse they beare, or are situated from London: the third, the distance of each of them from the said Citie: the fourth, the time of Sun-rising before it doth at London, marked with this letter A. or the

## A Prognostication.

the time after, noted with this letter P. The. 5. and last, the quantitie of the Longest day, in euery of the sayd places. If therefore you would know the Rhombe & Distaince, &c. betwixt the Citie of Ierusalem and London: or betwixt any of the sayd Cities and the same, there needeth no further labour, but directly vnder the Title, and ouer against the place required, you shall finde your desire in such easie maner, that further direction is needlesse.

## \* Of the Eclipses hapening this yeare 1609.

**T**hise this yeare in our sight, will the darke and droffie body of the Moone be intercepted fro the Sunnes splendant beames, by th'interposition of our mother-Earth in a straight line betwixt them. The first Eclipsation whereof, will happen the 1. of Iamuarie at one a clocke and 36. minuts in the morning: at which instant, she will be at her greatest obscuration (two thirdes of her body being deppriued of Sun-shine:) She will begin to be enuoloped in this earthy Shade vi. min. after midnigh, and continue more or lesse vnder the same, vntill iii. a clocke and xii. min. after: at which time, she will be quite freed from her opacitie, hauing perfectly recovered her borrowed light: so that the whole time of her obscuration, will be iust thre howers.

The effectes hercof (beginning the xviii. of August, and ending the xviii. of December following) do most concerne the kingdomes of France, Scotland, Affricke, Holland, Zeland, Prussia, &c. And the Cities of Constantinople, Venice, Genua, Yorke, S. Andrewes, Lubecke, &c. and all other Prouinces, Cities, Townes and persons subiect vnder the 4. Dodecatemorie-Cancer. And will most appeare in strange Diseases amongst women, in sodaine and violent death of many: in hindrances, depredations, and piracies of Trauellers, and Way-faring men.

**T**he vi. of Iuly likewise, at xi. a clocke and xviii. min. at night, neare vnto the Dragons rayle and Meridian line, will the wading Poone appeare totally darkned. She will begin to shroude  
her

her selfe vnder the Earthes bayle at ix. a clocke and 27. min. and be fully eclipsed 57. minutes past x. and so continue vntill mid-night: and then by litle and litle, vnfold her selfe from that obscuritie, vntill one a clocke and ix. minuts, when she will clearly againe enioy her brothers opposite beames: so that the whole durance of this Eclipse, wilbe iii. howers and 42. minutes, and the quantitie thereof 16. digits.

The effectes of the same, begin the vi. of December following, and end the xxvii. of March 1610. Whose furie, the Indians, Grecians, Macedonians, Lithuanians, Illirians, Saxonians, the Flanders of the Orchades, &c. And the Citizes of Meclin, Gant, Oxforde, Brandenburge, &c. And all the Countreies, Cities, and Persons subiect to the tenth Dodecatemorie Capricorne, are like to feele: which will rage in seditions, garboyles, murders, and other extremities, as well of body as minde.

And if Cardanus Sconerus, or other more ancient Astrologers, are to be credited, which affirme, that the Eclipses of the Moone do alwayes threaten disastrous fatalations to the Turke & Pagan: this Eclipse (being exceeding great) cannot but presignifie some notable ouerthrow, or other vtre euent, to those Barbarous and Antichristian nations: And the rather, for that their owne Prophecies do concurre with these times to the same effect: and that the fierie Triplicite doth now reigne, vnder which the Gospell of Christ hath alwayes had greatest propagation, and the Christians them selues best successe in all Partiall designments: and therefore the iudgement of Proclus (touching this Eclipse) may very well be applyed to the death or deuastation of that great tyrannicall Mahometist (the Turke) or his dominions.

Twice this yeare also, will the New-found Westerne-world, and once the Tartarian Region, suffer depriuation of the Sunne his beautilous beames: and once of the Moone, her borrowed light: whose effectes (because none of them appeare in our Horizon) neither concerne vs, nor the Climate wherein we liue, but will breake out among the Indians and Tartarians, in great Valsaces and bloody broyles: as in few yeares, will manifestly appeare.

A bricfe

## A Prognostication,

A brieve description of the state and disposition  
of the 4. quarters of this yeare. 1609. And first,  
Of Winter.

**T**his Hiemall Quarter took his beginning the xi. of Decem-  
ber last, at vii. a clocke and xxviii. min. in the after noone: at  
which instant, the fountaine of light (touching the first scruple  
of Capricorne) was farthest declined frō the plane of our inhabi-  
tance: and in regard of  $\frac{1}{2}$  small continuance of his glorious rayes,  
canst shorrest day and longest night in these Northerly Regions.

In this Quarter (after his naturall disposition of colours and  
moisture) are like to be many stormy blastes of raine & flecte: and  
about  $\frac{1}{2}$  middle thereof, some great frost or mippyng cold weather  
is againe threatned: Neither will Sickneses be strange, for be-  
sides the generall heape of Catarrhes, Goutes, Palsies, Dissente-  
ries, &c will many new vncouth arise, to the admiration of the Phys-  
ition, and griefe of the Patient, Many Robberies, and much theft  
likewise wilbe committed this Quarter, by the hands of dissolute  
and idle persons, which now begin to swarme more then usually.

## Of the Spring.

**T**his Vernall Quarter beginneth the x. of March at viii. a clocke  
and vii. min. in the after noone: at which moment, the Sunne  
seeming to approach the first min. of the æquinoctiall signe Aries,  
maketh equall dayes & nightes to all the world, vntill to such as  
inhabite nere either Pole, who haue continuall daylight some 8.  
dayes before & af. cr, in regard of the greatnes of the Sunnes sole  
shining body farre aboue the opacous & massie Dybe of the earth.

This Quarter is like to prooue very temperate, saving that  
blustering windes, and stormy tempestes will rage now & then.

The Diseases frequenting this Quarter, are Impostumations,  
Laskes Ulcers, Frensies, Feuers of all sortes, &c.

In this Resolution also (as well in regard of the Heauens dis-  
position at the Sunnes ingresse into Aries, as of his eclipsation  
which happened the last of July 1608. whose effectes begin to  
come in force the xxi. of Aprill this yeare, and end in November  
1611. and most concerne the South-east partes of the world) is  
threatned great hurly-burly and contention among Pefants and  
the

the vulgar sort, falcheries and discontent among Nobles & great per onages. many Robberies & Piracies, much Abortion, and vntimely death of many, and the losse of Substaunce of no few.

### Of Sommer.

**T**he Estiuall Quarter taketh his beginning at such a period of time, as the all-heating-Sunne entereth the first degree of the sollicitall signe Cancer, which will come to passe this yeare the xi. of June, at vi. a clocke & ix. min. in the after noone, for then (according to the received opinion) hath that glorious arch-flame, attained vnto the furthest limit of his Northerne declination, which causeth longest dayes and shortest nightes in this moitie of the world, only differing in quantitie according to the distance of the Inhabitantes from the equinoctiall line north-ward or south-ward, for vnder the same, the day is ever xii. howers long, and vnder the pole it is somewhat more then halfe a yeare long, and so proportionally increaseth or decreaseth according to the propinquitie or elongation of each severall paralell from the Equinoctiall, as is said.

The state and qualitie of this Quarter, will not much alter his accustomed temperature of heate and drought, if some stormy gulls and thunder-clapes about the middle therof hinder not the good successe of fruit and corne, depriving the husband-man of his gainfull expectation, which is greatly to be feared.

The infirmities incident the same, are burning feauers, head ach strang passions of the stomacke, fluxes, &c.

### Of Autumne.

**T**he Autumnall quarter (usually called Harvest) is said to begin at such a time as the Globe of Light hath (according to appearance) made his retinue from the Northerne Solstice, vnto the first min. of the equinoctiall signe Libra; which will happen the xiii. of September at viii. a clocke and xxi. min. in the morning, making againe equall dayes and nightes to all Nations.

The beginning of this Quarter, is like to prooue very dry, the middle windy, and end seasonably.

The Maladies of this season, will be many and dangerous, and seeme to proceed chiefly of euill dyet, and unholsoine ayre, and will shew their malice in Crampes, Conuulsions, Botches, Stitches, Strangurie, Collicke, Rheumes, vnaccustomed feuers, and other Diseases of doubtfull cure.

A more particular Prædiction, as well of the Rising and Setting of the Planets, and Ayres weekly disposition, as of the Good and Euill dayes in euery Month, for the better election of fit seasons to take any waighty matter in hand.

## Ianuarie.

Subtill h. shotted under ☉. wings, doth rise and set wth him.  
 Friendly ♃. appeareth South South east at ☉. setting.  
 Bloody ♄. is mounted to the Meridian when ☉. goeth downe.  
 Amiable ♀. is our bright evening Starre,  
 Wylde ♀. is our morning Starre.

First Quarter the ii. day, at xi. a clocke and xxiij. minuts at night,  
 (the 10. of ♈. ascending) raw cold weather. The vii. and viii.  
 dayes, more cleare and freezing.

Full Moone the x. day at one a clocke & xxvi. min. in the morning,  
 (the 9. of ♍. ascending) kindly winters weather. The xii. and  
 xiii. dayes some wet fall. The xv. & vi. dayes blustering winds.

Last Quarter the xviij. day vi. min. before two a clocke in the morning  
 (the 18. of ♍. ascending) some snow fall. The xxii. and  
 xxiii. freezing cold dayes.

New Moone the xxv. day at iij. a clocke and vi. min. in the after  
 noone (the 1. of ♎. ascending) and xxvi. & xxvii. dayes, frosty.  
 The xxx. and xxxi. dayes lusty winds.

### Good dayes.

2. A singling Tonge.
4. 5. As soone as thou please.
6. Very tractable.
7. Subtle and politicke.
10. His will is good.
12. Best in the end.
14. He cannot choose.
15. The Courtier is kind.
20. 21. Well managed.
22. Either now, or neuer.
23. A wily Py.
26. 27. Speake and speed.
28. 29. Forward if followed.

### Euill dayes.

1. A disastrous enterprise.
3. Beware the old one.
8. Crabbed and cruell.
9. Wofle and wofle.
11. 13. Not too fast.
16. Contention kills thee.
17. A dangerous deligment.
18. 19. Thy footing wil faile.
24. Enuious in the end.
25. Close and craftie.
30. No way good.
31. Decuifh and paultrie.

February

Brenor. 1609.

## Februrie.

**H.** and **F.** like cunning companions, watch for a bootie  
betimes in the morning.

**Honest V.** and **cruell J.** set 3. howers after **O.**

**F.** is still our mooring Starre.

**First Quarter** the first day, at vii. a clocke and ii. min. in the mor-  
ning (the 19. of  $\infty$ . ascending) windy and wauering. The iii. iiii.  
and v. dayes, cold and dry. The vi. and vii. dayes tempestuous.

**Full Moone** the viii. day at vi. a clocke and vii. min. in the after  
noone (the 1 of  $\cap$ . ascending) cloudy and milde. The ix. and x.  
frosty dayes. The xi. and xii. wind and raime.

**Last Quarter** the xvi. day, at ix. a clocke and xxvii. min. at night,  
(the 22. of  $\infty$ . ascending) and the xvii. xviii & xix. dayes frosty.  
The xx. and xxi. dayes, store of raime.

**New Moone** the xxiii. day v. min. before two a clocke in the mor-  
ning (the 25. of  $\cap$ . ascending) and the xxv. and xxvi. dayes, raime  
and tempestuous. The xxvii. and xxviii. mild and temperate.

---
